

Stainless steel rack holding 5 bedpans and urinals with a drip tray. Corrosion-resistant, easy to sanitise storage for wards and sluice rooms.

Constructed entirely from grade 304 stainless steel, this rack stores up to five bedpans and urinals on shaped support rails above an integrated drip tray that catches run-off during draining and disinfection. The seamless, non-porous surface resists corrosion and withstands repeated chemical cleaning, supporting strict sluice-room and ward hygiene protocols.
