

The Vital Medical ALS Refill (VM-ALSR) is a comprehensive restock kit for advanced life support bags, containing airway management consumables, IV access supplies, monitoring equipment, and resuscitation devices. Covers all critical interventions from airway to circulation in a single refill pack.

What Does the ALS Refill Contain?

The VM-ALSR is designed to fully restock an Advanced Life Support (ALS) paramedic bag after deployment. The refill addresses all five domains of ALS patient management: airway (Guedel airways sizes 000-5, ET tubes 2.0-8.0 uncuffed, laryngoscope 4-blade set, Magill forceps, suction catheters, Yankauer catheters, ET tube introducer), breathing (CPR mouthpieces, adult and child resuscitators, space blankets), circulation (IV cannulas 14-24 gauge, hypodermic needles, syringes, admin sets, tourniquet), monitoring (BP meter with 5-cuff set, glucometer with test strips, digital thermometer, pupil torch, Rappaport dual-head stethoscope), and obstetrics (cord clamps, mucus extractors).

Why Maintain a Fully Stocked ALS Bag?

An ALS bag that is not completely restocked between calls puts the next critically ill patient at risk of receiving delayed or incomplete care. The VM-ALSR eliminates the need for individual item procurement after each deployment – one refill kit restocks the complete bag systematically, with clear visual confirmation that all items are present. This is critical quality assurance for ambulance services, emergency medical services, hospital-based resuscitation teams, and remote site medical facilities.

Contents at a Glance

Airway: Guedel airways (2- each size 000-5), ET tubes (sizes 2.0-8.0 uncuffed), laryngoscope 4-blade set, Magill forceps adult, Yankauer suction catheters, suction catheters, ET tube introducer, 2- CPR mouthpieces, cervical collars. Vascular access: IV cannulas (14g-24g, 4 each), hypodermic needles 21g, syringes 5ml/10ml, admin sets. Wound/obstetric: alcohol swabs, bandages, burn dressings, gauze swabs, gloves, paper tape, plaster roll, rescue scissors, 2- mucus extractors, 3-

cord clamps. Monitoring: BP meter 5-cuff set, glucometer + test strips, digital thermometer, pupil torch, Rappaport stethoscope, 3? space blankets. Resuscitation: adult resuscitator, child resuscitator.
