

The Aloscan AT-62 Alcohol Tester (VM-AT62) is a compact personal keychain breathalyser with a 3-step LED alcohol indication, built-in torch, clock, and countdown timer. Weighing just 22.1g and measuring 70 × 36 × 17mm, it attaches to your keys via the included key ring chain — keeping it always within reach for a quick personal alcohol check before driving.

Keychain-Ready Personal Alcohol Screening

The Aloscan AT-62 is a pocket-sized personal breathalyser designed for everyday carry on a key ring, making it one of the most accessible personal alcohol screening tools available. At 22.1g and 70 × 36 × 17mm, it adds negligible weight or bulk to any key set, and the included key ring chain ensures it is always with you when you need it — in a car park, outside a restaurant, or at a social event — providing a convenient, low-effort personal check before making the decision to drive. The 3-step LED indication system delivers a quick, immediately legible result without requiring the user to read or interpret numerical BAC values, making it straightforward to use for any individual regardless of technical familiarity.

3-Step LED Indication, Torch, Clock, and Timer

The AT-62's 3-step LED display communicates the result of each breath test through a colour-coded indication — providing a clear at-a-glance read without a numerical display. Beyond breathalyser function, the AT-62 integrates a built-in torch, a clock, and a countdown timer in the same compact unit, making it a genuinely multi-functional keychain accessory rather than a single-purpose device. The fast response time and quick resume between consecutive tests mean multiple readings can be taken in rapid succession without extended waiting periods.

Intended Use and Availability

The AT-62 is designed and positioned for personal use — providing an informal, convenient reference for individuals assessing their own alcohol level before driving. As a personal screening device, it is not intended or suitable for occupational health screening, law enforcement, or any evidential or regulatory application; those applications require an electrochemical fuel cell breathalyser. For personal peace of mind and responsible decision-making, the AT-62 offers a practical, always-accessible solution. Available in South Africa from Vital Medical.

TECHNICAL SPECIFICATIONS TABLE

Specification	Detail
Brand	Aloscan
Model	AT-62
SKU	VM-AT62
Type	Personal keychain breathalyser
Indication	3-step LED
Weight	22.1g
Dimensions	70 × 36 × 17mm
