

The 6-Drawer Anaesthetic Trolley is a clinical-grade, epoxy powder-coated steel trolley with a stainless steel work surface, six organised drawers, and four 125mm castors with bumper wheel protectors. Built from 1.2mm mild steel and weighing approximately 45kg, it provides a robust, mobile workstation for anaesthetic equipment and supplies in operating theatres and procedure rooms.

The **6-Drawer Anaesthetic Trolley** is a purpose-built, heavy-duty medical trolley designed to organise, store, and provide immediate access to anaesthetic drugs, equipment, and consumables in operating theatres, procedure rooms, and critical care environments. Constructed from 1.2mm mild steel with a durable epoxy powder-coated finish and a stainless steel work surface, it combines clinical-grade hygiene with the structural integrity required for daily theatre use.

Six Drawers for Organised, Accessible Storage

The trolley features six drawers providing structured, tiered storage for anaesthetic agents, syringes, airways, monitoring accessories, and other theatre consumables. Organised drawer storage reduces preparation time, minimises the risk of misplacing critical items, and supports systematic drug management protocols in theatre environments ? particularly important in high-pressure clinical settings where speed and accuracy are essential.

Stainless Steel Work Surface

The stainless steel top surface provides a hygienic, easy-to-disinfect workspace for preparing anaesthetic equipment and medications. Stainless steel is non-porous, resistant to corrosion, and withstands repeated cleaning with hospital-grade disinfectants ? meeting the stringent hygiene standards required in surgical and anaesthetic environments.
