

The FS696 is a steel commode chair with locking castors for secure bedside and bathroom toileting. Dimensions 50?21?76cm, NW 7kg, maximum weight capacity 100kg. Four-castor wheeled frame with individual castor locks for stability during use. Available from Vital Medical South Africa.

Wheeled Steel Commode with Locking Castors for Bedside Toileting

The FS696 is a steel-frame commode chair with four locking castors, designed for clinical and home care environments where wheeled mobility between bed and bathroom (or between rooms) is required, combined with secure positional locking during commode use. The four-castor configuration allows the FS696 to be rolled smoothly to the bedside, bathroom or any required location, with individual castor locks applied to prevent chair movement once the user has transferred. This wheeled-with-lock design is particularly practical in institutional environments where a single commode may be shared between users and needs to be repositioned throughout the day by care staff.

Stable, Secure Commode for High-Use Clinical Environments

The FS696's steel frame provides robust structural support for the 100kg weight capacity across the daily use demands of hospital wards, frail care centres and nursing homes. The 7kg net weight is practical for care staff handling the chair during daily repositioning. Dimensions of 50?21?76cm provide a compact footprint within ward bays and bathroom spaces. The commode seat configuration ? including splash-proof commode pan ? is designed for ease of emptying and cleaning, reducing care staff time and improving hygiene in multi-user environments.

South African Hospital and Care Facility Commode Supply

The FS696 is a standard commode chair configuration for South African healthcare facilities requiring a wheeled, positionally stable bedside or bathroom toileting solution. Vital Medical supplies the FS696 to South African hospitals, frail care facilities, rehabilitation units and home care services requiring a reliable wheeled commode for daily clinical use.
